

Activity #3, Challenge 0 of 6: Overview

You completed activities regarding HTML and CSS. Now it's time to work through challenges regarding JavaScript. First, let's set up your environment.

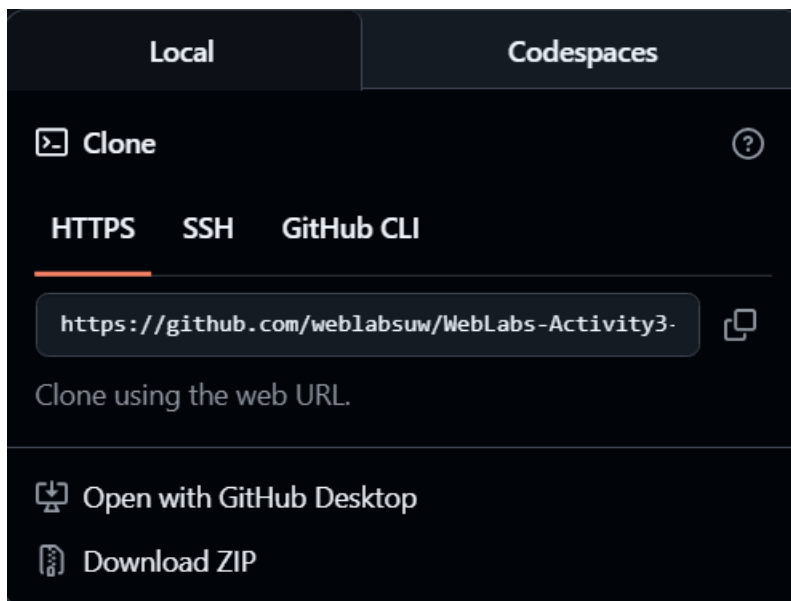

- Download and install **VS Code** on your computer
- Within VS Code, you can download the **Live Server Extension**

Next, you need to set up the activity by cloning the repository to your device. We do this through **GitHub**, which you will need and account for.

- Once you are signed into your account, fork [WebLab's Activity3 2025](#) on GitHub

- Clone the fork you created. You can use **GitHub Desktop** or **Git**

If you want to learn more about Git, you can read through this article on [How to use Git and GitHub](#).

The repository you just forked has the activity's template code, which will guide you as you complete each challenge. Hints and comments are included.

You're ready to get started! The password for your first challenge is **CourseSearch**.
